PERSONAL PROJECTS

Fruit Scanner V1

- Augmented reality iOS application for the visually impaired to assist with identifying fruit ripeness levels in home and grocery store settings.
- Current application features a custom Core ML model that identifies oranges, strawberries, and bananas and displays color-coded bounding boxes around each fruit to indicate the ripeness level in real-time with an inference speed of ~16 ms and 93% accuracy.
- Developed application UI and real time camera capture using XCode and Apple's Vision and AV Foundation packages.

The Outcast – First Person Game Experience

- Using Unity and C# I developed a 3D first person game experience featuring underlying racial and social issue related narrative meant to instill empathy and unified understanding of the greater negative impacts of underlying racism within American society using abstract forms and subjects.
- Scripted and custom modeled all features, characters, landscape, and interactions; Wrote and outlined all text narrative.
